

# ENV 790.30 - Time Series Analysis for Energy Data | Spring 2023

Assignment 1 - Due date 01/24/23

John Rooney

## Directions

Before making any edits to this file, please rename it such that it includes your first and last name (e.g., “LuanaLima\_TSA\_A01\_Sp23.Rmd”)

Once you have this renamed file open in RStudio, the first thing you will do is replace “Student Name” on line 3 with your name. Then you will start working through the assignment by **creating code and output** that answer each question. Be sure to use this assignment document. Your report should contain the answer to each question and any plots/tables you obtained (when applicable).

When you have completed the assignment, **Knit** the text and code into a single PDF file. Submit this pdf using Sakai.

## Questions

Q1. What are your previous experiences with time series analysis, R, and Git?

Answer: I have pulled data sets from Github before while taking ENV 710, but had never used Github or Git like we will be in this class with forking and cloning a repository and pushing and pulling files. My R experience is limited to 710, as is my very limited exposure to time series analysis.

Q2. (Only if you choose to use git) Provide a link below to your forked course repository in GitHub. Make sure you have pulled all recent changes from the course repository and that you have updated your course README file as instructed on the recorded video “Getting started with Git and Github”.

Answer: [https://github.com/ENV790/TimeSeriesAnalysis\\_Sp23.git](https://github.com/ENV790/TimeSeriesAnalysis_Sp23.git)

Q3. For this part we just want to see the path to your R project. No need to do anything. The output will be automatically generated once you knit your file.

Answer: This is my working directory:

```
getwd()
```

```
## [1] "/Users/jrooney/Library/Mobile Documents/com~apple~CloudDocs/TSA_Sp23/Assignments"
```
